Last Updated Tuesday, 27 October 2009

Valnet offers top quality web hosting at a reasonable cost to you. With plenty of storage for your website, and expandable quotas you'll never need to worry about space. Our servers have plenty of CPU to handle your scripting and database needs, as well as plenty of network bandwidth available to serve up your pages without delay.

One of the main features of our web hosting accounts is the lack of a bandwidth limit on your website. You're not limited to a specific amount of transfer per month, like so many low cost providers put in the fine print.

In addition to unlimited bandwidth, the cPanel administration interface you get the control you need to take care of your hosting solution at any time, day or night. CPanel is the worlds most popular hosting control panel system, and brings a host of advanced ease of use features to your fingertips, and even includes video tutorials on how to perform many common tasks such as Email administration, Backups, Logging & Statistics, MySQL, and FrontPage Extensions.

We also offer easy domain registration with competitive pricing for all major top level domains: com, net, org, info, biz, us, co.uk, org.uk, ca, tv, and cc. If you don't already have a domain name, see our competitive domain registration rates.

We also have hosting solutions available for hosting resellers and web designers. Consolidate your accounts to a single system with competitive pricing. Please contact us for more information and pricing.

Existing hosting customers on older servers will be migrated over time to the new server at comparably priced account levels, which will result in a significant increase in disk quota and features. If you are an existing hosting customer and would like to work with us to get your site migrated to the new servers, please contact us at either 888-332-1616 or support@valnet.net. CPanel Preview
